SUMMARY

Software developer specializing in AI/ML and full-stack engineering, building and deploying ML-powered applications end-to-end with Python, MERN, PyTorch, and HuggingFace Transformers. Grounded in data structures, algorithms, and system design, with production tooling across FastAPI, Docker, and AWS/GCP.

EDUCATION

B.tech in Computer Science and Engineering, Vellore Institute of Technology (8.65) Aug 2023 — Present

EXPERIENCE

Software Engineer May 2026 — Jul 2026
Ayuka Developers Gohana

- Translated functional requirements into scalable, user-focused software solutions, reducing **turnaround time** by **10%** across the development lifecycle.
- Optimized application performance and reliability by conducting targeted debugging and testing across core application features, identifying and resolving critical bugs that improved load time by **15%.**

Data Science Intern Jun 2025 — Jul 2025
Zidio Development Remote

- Analyzed datasets using **SQL** and **Python**, uncovering trends that informed decisions across **10** cross-functional teams.
- Built automated dashboards using **Tableau**, reducing manual reporting time by **15%** and improving data accessibility for stakeholders.

PROJECTS

ShoulderMotion AI — AI-Assisted Markerless 3D Clinical Motion Analysis Platform Mar 2024 — Jun 2024

- Built an AI-powered computer vision platform (Flutter, FastAPI, MediaPipe) automating postoperative shoulder assessment to support clinical decision-making.
- Designed the Adaptive Shoulder Recovery Index (ASRI) and Dynamic Movement Quality Engine (DMQE), delivering explainable, clinically-validated rehabilitation analytics.

Sigil — Self-Sovereign Identity Jul 2026 — Aug 2026

- Building a self-sovereign identity platform (Next.js, Ethereum, IPFS, WebAuthn) enabling secure issuance, verification, and selective disclosure of digital credentials.
- Implementing Merkle-root batch verification, zero-knowledge age proofs, and M-of-N guardian recovery, with on-chain trust management deployed on Ethereum Sepolia.

Predicting Power Grid Failures with Deep Learning (LSTM) Sep 2025 — Nov 2025

- Built an LSTM-based predictive maintenance system ingesting multi-variate sensor streams (weather, demand, transformer temperature) to forecast power grid failures before they occur.
- Trained the model to detect anomalous failure signatures in real-time streaming data, achieving **10%** precision/recall in early failure detection to help prevent blackouts.

RareCare: AI-Assistant for Rare and Stigma-Associated Diseases (Ongoing) Jul 2026 — Present

- Developing RareCare, a diagnostic system combining BioBERT for symptom analysis and CNNs (trained on MedMNIST) for scan-based screening of rare and stigma-associated diseases.
- Extending the system for early screening of stigma-related cancers, with deployment via Flask and Hugging Face for accessible inference.

SKILLS

Programming Languages: Python,Java,C/C++
Web Development: HTML,CSS,MERN Stack,Tailwind CSS
AI/ML & Tools: PyTorch, HuggingFace Transformers, Scikit-learn, FastAPI, Docker,git, AWS/GCP
Core Competencies: Data Structures & Algorithms, OOP, Compiler Design,Operating Systems,Computer Networks

ACHIEVEMENTS&INVOLVEMENTS

All India Rank 47 — VIT Engineering Entrance Examination (VITEEE 2023)
Core Committee Member — Technical Team, VITMAS Club (2024 – 2025)
Core Team Member — Organized Inter-College Hackathon, E-Cell (2023 – 2024), hosting 500+ participants

CERTIFICATIONS

Oracle Certified Foundation Associate. (Sept 2025)|IBM Agentic AI Professional. (July 2026)
